

FACULTY OF ENGINEERING

S1 - PROGRAM

# CIVIL ENGINEERING

## Program Description

Civil Engineering classes are conducted inside and outside of classrooms. Students can work outside of class to observe building projects around the city. Therefore, students gain not only theories on civil engineering but also its applications.

During the course of the study, students have been trained to sharpen their knowledge and soft skills such as trustworthines, creativity, and confidence. These skills help students find jobs more easily. In less than three months after graduation, the majority of the alumnae have obtained a job. The alumnae work in various fields from construction services, banking, trading to insurance and government institutions.

Civil Engineering graduates from Soegijapranata Catholic University are awarded an ST (Sarjana Teknik) degree. They can work as architects, interior and exterior designers, in various public or private institutions.

## Cooperation

The Department of Civil Engineering cooperates with many companies and institutions such as building contractors, consultants, housing material industries, local and national government.

## Facilities

For learning process, the program provides hydraulic and soil mechanic laboratories to support the teaching and learning process.
