

FACULTY OF ECONOMICS AND BUSINESS

D3 - PROGRAM

TAXATION

Program Description

Tax is one of the biggest income generators in Indonesia. Government depends heavily on income from taxes. The policy of regional autonomy supports the efforts of the local government to find revenues, especially those from taxes and retributions, to fund the development of regional and local infrastructure. The important role of taxes and retributions in supporting the local, regional, and national development necessitates the improvement of regulations, policies, and taxation systems.

Soegijapranata Catholic University, as a higher education, is called upon to actively participate in the national development by providing excellent education for Indonesian nationals in the field of taxation. We provide excellent education for the nation's talented young generations, so that they can eventually become reliable and professional taxation experts.

Competence

Our graduates are expected to become experts in taxation who possess extensive knowledge of tax regulations, skills in calculating, submitting, and filing many kinds of tax reports.

Teaching Staff

Department of Taxation has competent and qualified lecturers who hold masters and doctoral degrees. Some excellent practitioners teach in our department to provide students with better insights about practical applications of the field and job opportunities.

Curriculum

We adopt competency-based curriculum. Students graduate after completing the 110 credits offered in 6 semesters. However, many students can graduate in less than 3 years. The curriculum is designed with the aim to produce graduates who are ready for the workplace. The curriculum includes, amongst others, practical taxation and accountancy subjects, practical fieldwork, and *capita selecta* tax which is a subject that merges accountancy and taxation. All subjects are based on case conditions that are occurring in the field. These, therefore, could assist students to understand the practice of taxation in the real working world.

Facilities

- a. Tax Center
- b. Updated online tax regulation software

Cooperation

We establish cooperations with local and regional tax offices, Indonesian Tax Consultants Association (IKPI), Tax Training Center, and Association of Indonesian Businesswomen (IWAPI).

Career Opportunities

The graduates of Department of Taxation will face great opportunities and challenges in the future. There have been a number of requests of graduates and students every semester to fulfill the needs of experts in taxation. Thus, most students have obtained employment even before their graduation. The prospective areas of employment include in the government sector as tax authorities as well as in the private sectors as tax payers. Graduates can develop themselves further in both sectors, for example, in the field of taxation and general finance, to become a tax consultant, auditor or even an entrepreneur.
